🐙 <https://github.com/AzucenaGrecia>

Senior Full Stack Software Engineer with 5+ years building production web products with **React, TypeScript and Next.js**. Currently founding engineer at a B2B SaaS serving 30+ paying customers across Peru and Mexico, responsible for the whole product: frontend architecture and design system, REST APIs, and third-party integrations. Fully remote since 2021 across US, Chilean and Ecuadorian teams. English B2.

Experience

Founding Engineer

FLOWPASS

September 2025 - Present

Product & Engineering

Remote, LATAM

- Grew the product from zero to **30+ paying customers** and \$1.7K MRR at **33% month-over-month growth** and a 25x LTV/CAC, expanding from Peru into Mexico as the only full-stack engineer on the core platform.
- Own the whole web platform in **TypeScript**: built a reusable component library and design system, role-based permission gating, and a mobile build via Capacitor, on SvelteKit + Tailwind v4 – the same component and state patterns as React/Next.js.
- Designed and built the multi-tenant REST API with Node.js, TypeScript and Fastify over Supabase (PostgreSQL) and Redis, with JWT/JWKS auth, per-tenant quotas and real server-side pagination.
- Shipped Peru's SUNAT electronic invoicing end to end (FactPro), from RUC validation to XML/CDR downloads and the legal window to cancel an invoice, plus a WhatsApp AI assistant for members using LLMs and MCP.

Senior Software Engineer

HYPERPROOF

July 2025 - December 2025

Backend

Remote, US

- Improved and maintained Hyperproof integrations using TypeScript, Node.js, Azure and a declarative integration framework, ensuring reliable data sync and resolving complex issues across connectors like Orca Security, Coupa and Okta.
- Worked day to day with AI-assisted development tooling (Codex) on a distributed US-based team, in English.

Full Stack Developer Instructor

CODEABLE LABS

May 2025 - December 2025

Freelance, part-time

Remote, Peru

- Taught and mentored students through an intensive Full Stack web development program, covering JavaScript, React and REST API fundamentals, and reviewing their code one on one.
- Learned to explain technical trade-offs in simple terms and to give clear, useful code review feedback.

Senior Software Engineer

RUMBO

April 2025 - August 2025

Contract

Remote, Peru

- Built two products with **Next.js, React and TypeScript**, using React Query for server state, Zustand for client state, and React Hook Form with Yup for validated multi-step forms.
- Delivered a coworking booking platform: reservation calendar UI, Auth0 authentication, and Culqi one-click card payments, backed by a NestJS + TypeORM + PostgreSQL API with Swagger docs and e2e tests in Jest.
- Integrated Peruvian electronic invoicing (Efact) into the billing flow, mapping order data to SUNAT-compliant documents.

Software Engineer

XEPELIN

July 2023 - January 2025

Full Stack

Santiago, Chile

- Built a new document section for Xepelin's client platform that cut review time by **37%**, using **React, Next.js** and TypeScript on the frontend with NestJS, AWS, DynamoDB and GitHub CodePipeline behind it, integrating with Niva via REST API.
- Shipped new features for client onboarding and ran **A/B testing with Flagsmith** to optimize the user experience, using Next.js, NestJS, Express and MySQL.
- Led the integration of biometric validation with the Mexican Electoral System (INE) via a NestJS microservice using SOAP, automating onboarding, reducing processing time and preventing identity theft.
- Built a proof of concept to automate legal document review with LangChain, Python and OpenAI's API to extract data from PDFs.

Software Engineer

KUSHKI

January 2022 - July 2023

Full Stack

Quito, Ecuador

- Developed **micro-frontends** for Kushki's Administration Panel with **React**, single-spa, **Redux Toolkit** and React Testing Library, so independent teams could ship to the same panel without blocking each other.
- Designed and implemented cloud-native architectures for cash-in, cash-out and transfers using AWS Lambda, DynamoDB, S3, Step Functions and SQS, reducing processing times by over **20%**.
- Built event-driven REST APIs with Go and Node.js, and processed large daily transaction volumes with a Scala ETL over AWS S3 to speed up reconciliation.

Software Engineer

B89

August 2021 - January 2022

Full Stack

Lima, Peru

- Led the development of B89’s Administration Panel with **React, Redux**, Ant Design and Axios, improving customer support with tools for managing credit lines, client status, cashback and debt financing plans.
- Prototyped a scalable frontend architecture with micro frontends using **Module Federation (Webpack 5)** and single-spa.js, and built REST and gRPC services with Node.js (Moleculer.js) and Apache Kafka on an event-driven architecture.

Education and certifications

- **Bachelor of Science in Industrial Engineering**, University of Engineering and Technology (UTEC). Top 5% of class. **2013-2018**
- **Codeable Bootcamp**, Intensive Full Stack web development education program. **2021**
- **Software Architecture: REST API Design**, Udemy. **2023/03**
- **Introduction to Serverless, Lambdas and API Gateway with AWS**, Udemy. **2022/03**
- **ReactiveX - RxJs**, Udemy. **2022/02**

Languages and technologies

- **Frontend**: React, Next.js, TypeScript, JavaScript, Redux / Redux Toolkit, React Query, Zustand, React Hook Form, Tailwind, Styled-components, HTML, CSS, micro-frontends (single-spa, Module Federation), Svelte / SvelteKit.
- **Backend & data**: Node.js, NestJS, Fastify, Express, Go, Python, Ruby on Rails, REST, gRPC, Apache Kafka, PostgreSQL, MySQL, MongoDB, DynamoDB, Redis, Supabase, SQL.
- **Cloud & tooling**: AWS (Lambda, S3, SQS, Step Functions, EC2, CloudWatch, DynamoDB), Azure, Docker, git, Jest, Cypress, React Testing Library, Vite, LLMs / LangChain / MCP.
- **Languages**: English (B2), Spanish (Native).
